

Balanced Enterprise Solutions Plant Relocation/Expansion Service

Cross Town . . . Cross Country . . . Cross Border

The BES assurance of providing Customer Focus . . . Targeted Solutions . . . Bottom Line Results means our experienced team will ensure your plant relocation or expansion needs are met with the solution that fits the situation and your budgetary requirements.

Bottom line: your relocation will be handled properly from beginning to end.

The BES methodology for plant relocation means a well planned move that reduces your equipment down time and results in a faster up time at the final location. Our turn key service is a full capability service.

ADVANTAGES OF BES TURNKEY SERVICE:

BUDGET

You know the final project cost up front – don't have to depend on multiple contractors and companies completing the project and projects costs being impacted by project delays. BES owns the process from beginning to end.

PROJECT MANAGEMENT

By using BES plant relocation service your move and plant relocation will be handled from early planning stages to startup at the new site. Our experienced team has handled small (production cells) to large (complete facility) moves across town or cross country or across the border. We will plan the project to minimize your equipment down time; through the use of lean concepts and cellular layout, we can maximize floor space utilization at the new site. All elements of the relocation process are included in the project plan which uses MS Project as the software of choice. The project execution process includes regular reviews of the plan with the client to avoid surprises.

INSTALLATION / INTEGRATION

We will prepare the facility to receive the equipment, set and level the machinery, and make all connections. We will coordinate any new or special requirements for the facility such as power, mechanical, and piping additions or modifications. These requirements will be integrated into our detailed project plan which includes facility preparation as a key element of the process.

ACCOUNTABILITY

By using one company to complete the project, your downtime, driven by multiple contractors on various schedules is minimized. Our skilled tradesmen have moved and installed multi-load plants within the client's schedule constraints, to minimize downtime and impact on your customers.

BES Services offered:

Transportation of all equipment
Domestic / International Transfer
Turnkey documentation pre and post move
Storage - long or short term including preservation
Reinstallation at new location
Fabrication of special needs
Equipment Purchase
New Equipment Integration
Procurement / Contract Administration
Plant Engineering Services
Tagging Documentation
Plant layout / cellular design
Documentation of all move details
Certification – local, national, international
Cleaning – pre or post move
Painting of plant or equipment
Equipment Refurbishment
Excess Material, Equipment and Scrap Removal

Our Staff:

Our experienced staff has years of military logistics and planning experience as well as more than 35 years of commercial industrial experience. It was a natural extension of that military experience to extend the service to commercial companies and industry. Our riggers and skilled trades have an average experience of more than 10 years. Multi-skilled trades ensure the job is done right.

Equipment: We have the right equipment necessary to successfully complete any project - large forklifts, specialized cranes, and oversized gantry system. A fleet of trucks along with relationships supplemented by additional long-haul carriers to handle multi-week moves gets the job done quickly and efficiently.

Safety: BES is committed to the safety of our employees, our customers and their equipment and facilities.

BES has a documented safety program and policy. We perform pre-employment drug testing as well as random testing to ensure the safety of your employees, our employees and your equipment. We train to do it right the first time and every time. Additionally each project is managed within the context of safety to meet industry and governmental standards.

Short notice relocations – did some else drop the ball, forget to plan, or not get the right equipment or skilled tradesman line up – we can help

With our experienced staff and extensive relationships we can usually get the needed resources together to meet our clients needs even with very short lead times.

Balanced Enterprise Solutions turnkey relocation/expansion benefits:
